

ESG Building Scientists Work With Home Builders

Craig Whittaker 2010-04-24

Steve Armstrong appeared in a news video about working with building contractors as they develop green and energy efficient properties.

Watch the video at:

In addition to providing green build verification services for the NAHB, ESG Energy provides energy analysis for the EPA's ENERGY STAR Homes program. The firm has conducted green audits for several thousand HUD-maintained properties and assists residential and commercial property owners with energy use analysis. ESG Energy launched its Carbon Footprint Certification Program in 2010, which is intended to lessen climate change by encouraging good practice in carbon measurement, management and reduction.
